

The Elegant and Sophisticated design of the Drop Collection of radiators draws inspiration from the Jewellery Collection of designer Jana Acevska. The idea was to create a sculpture, a functional work of art with technology use. Each of the six models is characterized by a unique shape that balances minimalism with elegance.

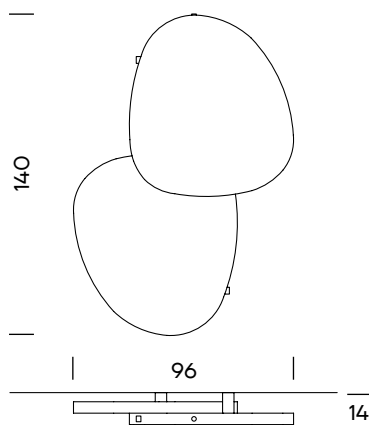

Heating technology that supports the possibility of this modular combination is adopted from the processing industry. It was developed from stainless steel flexible hose that quickly follows the drop shapes to copper pipes that form individual heaters.
